MissMaudeWhite Speaks To Club

Miss Maude White, Visiting Teacher for Bulloch County, was the speaker Thursday, February 21, for the February meeting of the Statesboro Senior Women's Club. Miss White addressed the club and guests on "Good Communities are Alert to the Needs of Every Group." The Community Affairs Committee, with Mrs. H. S. Bondurant as Chairman and Mrs. James Crockett as co-chairman, was in charge of the program. The club met at 7:30 p.m. at the Statesboro Hotel. The program was presented on the Annie Armstrong season of prayer.

Announcements made by Mrs. DeWitt Thackston, first vice president, who presided in the absence of Mrs. L. M. Durden, included the good news that efficient funds were raised at the Benefit Card Party last month to complete the purchase of the skin grafting machine that has been presented to the Bulloch County Hospital. The skin-grafting machine will be of invaluable service in the cases of burned patients and severe accident patients who have sustained facial injuries. A report was given from the Tallahassee Fair Drive and a total of \$62.30 sent to the school from the local club. The final announcement concerned the First District Meeting of The Georgia Federation which will be held on March 12 in Gwynn.

The Education Committee was in charge of the social hour with Mrs. J. A. Pafford, chairman, and Mrs. E. B. Stubble, co-chairman, serving refreshments.

S. E. BULLOCH HIGH SCHOOL SPONSORING DANCE
The senior class of the S. E. Bulloch High School is sponsoring a dance Friday night, March 1, at 8:00 o'clock. Music will be furnished by the Emma Kelly Combo.

AKINS APPLIANCE COMPANY - 21 WEST MAIN ST. - STATESBORO, GA.

Paul Franklin, Jr. Receives Award

Paul Franklin, Jr., owner of Franklin Retail Drug Store on S. Main St., Statesboro, is one of the nation's first Retail drugists to receive the new Master and Pledge Trophy, presented by the Retail Drug Company as an annual award to outstanding member-drugists.

The award is an authentic replica of a 16th century bronze mortar and pestle cast at Deventer, The Netherlands, in 1590. It was presented on February 18 by Retail representative J. H. Gamble at Franklin's.

The historical mortar and pestle, still an important implement in the pharmacist's profession, is an ancient symbol of pharmacy. Its use for pulverizing medicinal herbs is recorded in the histories of ancient Egypt, India, Greece, and Rome.

Legislation Of Local Interest

In an effort to get a factual and comprehensive report on the recent session of the General Assembly of Georgia and with particular interest in bills that will directly affect our own county, the Times has turned to one of our representatives, Francis W. Allen, to assist us. Consistent with the facts he has given us a report reproduced here that is both complete and interesting on the legislation passed in the recent session.

By Francis W. Allen
The 1957 Session of the Georgia General Assembly began on January 14th with an unusually large number of new faces in both houses. Business began rather slowly since it was the start of a new term and the members had to first acquaint themselves with organization. Very little legislation of a highly controversial nature cleared committee, no tax increases or decrease measures and few bills requiring the expenditure of funds reached the floor of either house.

Once the legislative wheels began turning, the usual type bill reaching the floor was on granting a citizen relief from some administrative burden or a tightening of professional or trade requirements. While few of the bills were headliners, people all over the state will find ease of living improved as a result thereof. A sprinkling of the bills passed follows:

No. 1—Continues teacher retirement and pension benefits to teachers and other public school employees who accept employment in nonsectarian private schools.

No. 2—Gives emergency emergency rule and regulations in event of actual or threatened violence.

No. 3—Authorizes the governor to suspend compulsory school attendance in event of an emergency.

No. 12—Increases the amount of liability insurance or bond required in the event of a motor vehicle accident.

No. 45—Authorizes alternate jurors in trials held in the superior courts.

No. 53—Defines grounds for refusal to issue or revocation of licenses to practice medicine.

No. 63—Provides that sufficient notice of eviction is given by taking a notice on the door or by handing the warrant to any person on the premises.

No. 77—Permits a husband and wife to testify for or against each other.

No. 87—Sets the Scribner Decimal C lot rule or scale as the legal standard for calculating board feet in Georgia.

No. 103—Sets the hours between 7 a.m. and 7 p.m. as the legal hours for holding all general, special and primary elections in Georgia.

No. 130—Adds 150 patrolmen to the Department of Public Safety.

No. 143—Requires polo shots for school children.

No. 171—Authorizes the sale of lots on Jekyll Island and abolishes the present Jekyll Island Authority, replacing it with an authority comprised of the state auditor, secretary of state, director of state parks, attorney general and Public Service Commission chairman.

No. 177—Repeals from the code section of powers and duties of the State Highway Board the section preventing it from regulating the site and location of driveways inside city limits.

No. 195—Increases local school spending for the Minimum Foundation Program by unfreezing the chargeback.

No. 210—Requires registration of new or unregistered motor vehicles, trailer, tractor, or motor cycle within ten days following purchase.

No. 310—Gives judges power to suspend license of an operator convicted of otherwise found guilty of speeding.

No. 410—Requires driver's license for operators, not to exceed five brake hp.

No. 460—Changes from six months to a year the time for applications for refunds on tax paid on gasoline used for agricultural purposes.

No. 528—Vests powers and duties in State Board of Health program for hospital care of the indigent.

Senate.

SB No. 18—Restricts parents right to revoke their consent to adoption proceedings after consent given freely and voluntarily.

SB No. 42—Authorizes the Department of Public Welfare to establish a facility for mentally defective negro children.

SB 116—Provides that adoptive

Childish Impulse

Most of the 6,000 adult pedestrians killed on the streets and highways last year were more the victims of their own childish antics than of the automobiles which struck them, according to the public education department of the Aetna Casualty & Surety Co. In "Pedestrians: Grow Up and Live," a new pamphlet just issued, the company's safety specialists liken the grown-up jaywalker to the child who plays hopscotch in the street. "Many dangerous walking habits reflect a childish impulse we have never shed," they say.

Publication of the safety booklet, which is being distributed as a part of the company's publicity program, coincides with the onset of Winter's shorter days, the peak period for pedestrian fatalities.

Among dangerous walking habits which show a "juvenile attitude toward safety" are crossing against the light, crossing against the right of way, ignoring pedestrian safety areas, stepping from an auto into traffic, and not paying attention when crossing the street.

There seems to be no better insurance for growing old than growing up. This applies not only to the pedestrian but to the drivers of the cars.

NACOOCHIE
Nacoochie in White County, had the first white trading post in the area in 1822. A settlement was soon established on the site where Indians traded gold nuggets and gold dust to the settlers for merchandise. Here, in 1838, soldiers brought Indians from surrounding valleys and highlands to begin their "Trail of Tears" to the West. Georgia Historical Commission.

What About The Armed Forces?

By Max Kellogg
Director, Statesboro and Bulloch County

The job of the United States is to win a war, mainly by a surprise attack to the enemy. Civil defense is not their responsibility. This does not mean the Armed Forces are taking a hands-off attitude toward civil defense.

Armed Forces experts have worked with the Federal Civil Defense Administration to determine in which areas are most likely to be attacked. Armed Forces experts also have told the Federal Civil Defense Administration what kinds of attack could be expected and what to do about them.

Armed Forces do have some definite civil defense jobs, such as making decisions on blackouts, dimouts, camouflage and radio silence. Through the air raid warning system, the air force warns civil defense authorities when an attack is imminent.

The air force operates the radar screen and the ground observer system. It must do this in order to know when the air raid bombers are coming. The air force would give warning to civil defense officials if enemy planes were sighted.

State and local civil defense departments then sound the alarm and raid warnings in their own states or communities. Once the warning had been given to the civil defense system, however, that air force escape, having saved a jail cell bar in two.

Plans are being made for joint paying, a committee from city council now being on an inspection tour of neighboring cities. This committee comprises Mayor J. W. Rountree, Councilman A. J. Franklin, City Engineer F. G. Groover and citizens S. F. Olfitt and E. C. Oliver.

FIFTY YEARS AGO
Bulloch Times March 6, 1907.
Charles and Robert Donaldson had purchased from C. E. Cone the Statesboro Bottling Works, of which they assumed charge on the first of the month.

HERMAN TALMADGE Reports From WASHINGTON

TWO CONCLUSIONS FROM the debate over the so-called Eisenhower Doctrine for the Middle East are inescapable: (1) The United States has no definite foreign policy and (2) this nation would find it manifestly impossible to fulfill all of its unilateral military agreements at any given time.

THE ECONOMIC ASPECTS are fraught with real dangers equally as serious as the physical threat of the military phases. With this nation's economy in jeopardy from inflation it is foolish to contemplate "blank check" spending of hundreds of millions of dollars to bolster a section of the world which has the earth's richest oil deposits and, but for the greed and despotism of its absolute powers, could be enjoying a standard of living rivaling our own.

THE MIDDLE EASTERN REGION, coupled with the previously-adopted declaration pledging the integrity of Persia, creates an untenable military situation for this country. The two commitments together obligate the United States to oppose aggression by the world's two greatest powers, Soviet Russia and Red China, at opposite ends of the globe and to do it without allies.

TO TIE THE HANDS OF CONGRESS to make or declare war or to prevent American troops to wage diplomatic war such as the Korean conflict. Neither do I favor any commitment of American soldiers under the command of the United Nations without specific approval by Congress.

New Lab At Midville Opened

Georgia's fifth poultry diagnostic laboratory to serve the poultry and egg producers of Southeast Georgia will be dedicated in Burke County on March 1.

THE NEW LABORATORY was equipped by the State Department of Agriculture. Land for the building was donated by Burke County Commissioner J. Frank Farmer, and the Burke County Commissioners constructed the building.

NEWS OF INTEREST TO FARMERS — SOIL CONSERVATION — FORESTRY — LIVESTOCK

News of the Farm Bureau

By Byron Dyer

F. L. Williams opened the Westside meeting Tuesday night with invocation. Carl Bishop, secretary, stated the group had \$402 in the treasury. The group voted to invite the Bulloch County Singing Convention to use the school building April 7, for their annual all day singing.

Hudson Allen was at his best with some humor and wit that helped make the meeting jovial. The program was set of slides on controlling turpentine beetles, which recommended the use of one per cent mixture of BHC and number two fuel oil as a spray on the affected trees up to six feet from the ground.

Pays off in attractiveness, pleasure and hard cash... but you got to protect them from fire!

The Stilson group will have the Southeast Bulloch High School's debating team on the subject of whether farmers should have 90 per cent of parity support or not on the basic crops grown here. Miss Miriam Cribbs, Joel Sikes, Elynn Burnsed, and Ronald Starling participated in this debate under the direction of Mrs. John Proctor.

Several of the chapters have used these debating teams as their program this spring and found that this subject is of material interest to the Farm Bureau members. West Side plans for such a program in March.

The Stilson group will have the Southeast Bulloch High School seniors as their host for supper in March, with the money paid for supper going to help defray the expenses of the class trip in the spring.

James Davis, the Stilson president, named Harold McElveen as chairman of the Red Cross drive in the community with Dan C. Lee as co-chairman. They hoped to complete this drive in March.

Orders for seed corn were completed at the Ivanhoe meeting Friday night, totaling some 120 bushels of hybrid corns adapted to this area. J. H. Wyatt of Brooklet sold the group this year.

A new motion picture on naval stores production, "More Profits By Gum", was a part of their program. The picture has just been released. It was produced by the Extension Service around Valdosta. Following the picture, the subject of why it was necessary to add heat to a turpentine still to keep it from boiling over was brought up. P. F. Martin, one of the county's leading turpentine producers and former still operator, was the discussion leader. It is generally known that when water starts to boil over, it reaches the heat to prevent this from happening. However, with gum the story is different. It is necessary to increase the heat when gum with right much water is in it is put in the still to prevent the still from boiling over. Mr. Martin stated that the increased heat was essential to remove the excess water fast and then add the needed water from there on. It is not possible to determine just how much water is in the gum when placed in the still. After all this water is removed, the operator then controls the water added and can fire normally. When a turpentine still boils over, the chances are it catches fire. Still operators get kinda busy if much water is in the gum when heat is first applied, and Mr. Mar-

A million-dollar tank for the atom

Every day these workmen are bringing atomic electricity a little closer. They are building a small section of the reactor vessel that will contain the nuclear fuel for the Enrico Fermi atomic power plant near Detroit, Michigan.

The Georgia Power Company is participating in the project with 17 other electric utility companies, a group of equipment manufacturers and the U.S. Atomic Energy Commission.

Electric utility companies throughout the nation are taking part in a total of 10 atomic power construction projects. Every one of these developmental plants is scheduled to be in operation by 1962.

With only 6 per cent of the people, the United States has about 40 per cent of the world's supply of electric power. America produces more electricity than the next seven nations combined.

Now we are taking the lead in finding the most economical and best methods of using atomic energy to make electricity. The Georgia Power Company is glad to shoulder its share of responsibility in this great new job.

GENERAL W. BURNSED FUNERAL SUNDAY

Funeral services for General W. Burnsed, who died last Friday, were held Sunday at 4 p. m. at Red Hill Church, with Elder J. M. Tidwell and Rev. Gerald Dye officiating.

One of the oldest settlers of the Bay district of Bulloch County, he was a well known farmer.

Survivors are his wife, Mrs. Alice Denmark Burnsed; a daughter, Mrs. Bessie Burnsed, Pembroke; four sons, Tommy of Pembroke; Edward, Mt. Holmes, Idaho; Vista of Ogden, Utah, and G. W. Jr. of Savannah; 19 grandchildren and 22 great-grandchildren, several nieces and nephews.

Morrison Funeral Home of Pembroke was in charge of arrangements.

It is not convenient for you to go to a social security office, you may obtain a blank application at your post office. Fill it out and mail it to the social security office serving your area.

If you already have a social security number, do not apply for another. Use the same number to report any and all earnings.

Your account number must be shown on Schedule F of your income tax return to insure proper credit to your social security account. Failure to furnish the correct number may result in loss of benefits.

OLD IDEA

Your eyes can give you away—and since they can, beauty-minded women have been concentrating on the attractiveness of their eyes for these many years. For example, the idea of eye lotion to soothe overworked eyes is not a new idea. Records show that women of the 16th century had already discovered this quick and pleasant solution to an ageless problem.

REVIVAL AT HILLSIDE, NEAR COBBTOWN, MARCH 4-18

A revival will begin March 4 at the Hillside Church of God, near Cobbtown and will continue for two weeks. Rev. Hilda Hulet will be the evangelist.

In February, 1777, Robert Morris wrote to John Paul Jones, "I think you should carry with you as many Marines as possible for they will be useful and necessary in all your land excursions."

Interest On Public Debt Is Important

By Thurman Senzing Executive Vice President

Southern States Industrial Council

If the American people would only take more interest in the public debt, they would undoubtedly have to pay less interest on the public debt.

As it is, it is exceedingly doubtful that the average American knows what his debt burden is and what sort of burden he is passing on to his children and his children's children. Neither does he realize the vulnerable position in which our economy is placed by virtue of a public debt which requires an enormous fixed interest payment each year.

The national debt now stands at about \$280 billion, and state and local debt at about \$50 billion. This makes a total of \$330 billion in public debt that the people owe. Just to pay the interest charge on this debt requires \$8.1 billion a year. This accounts for about 11 out of every \$13 that taxpayers

pay to governments at the various levels. As a matter of comparison, this interest charge on public debt is greater than any total peacetime budget in our history prior to 1936 with which to operate the entire national government.

The Federal Government balanced its budget last year, so the national debt did not go up—but the interest charge will rise because the debt is large, and it will also rise because the rate of interest will be higher. When more people want to borrow more money and continually add to the amount of their debt, whether this debt be public or private, then the law of supply and demand takes effect here just like it does in any other phase of a free economy—the price of

money goes up and interest rates must rise. Either that or printing press money—and a continuous and disastrous inflation which is certain to eventually destroy the nation's economy.

The only way to avoid disaster in one direction or the other is by economy in government—and we should not let taxes and spenders or the "new dealers" in economics tell us otherwise.

Soil conservation includes any and all measures that will in any way increase the productivity of the land and cause the land to keep on producing satisfactorily.

But while the Federal Government is more or less holding the line, the state and local governments are on a spending and borrowing spree. Ten years ago, the total debt of state and local government amounted to less than \$16 billion, now it is close to \$50 billion and the total is rising at a rate of nearly \$5 billion a year.

This great increase in public spending on the part of local and state governments is hardly avoidable, due to the rapid growth in population which is spreading over the face of the land and demanding the services of all sorts. Nor can these governments get the money needed from increased taxation alone, though they have been increasing taxes in many ways since the end of the World War II.

The reason state and local governments cannot go farther than they have toward increasing taxes and providing the facilities needed with current income is due to the continuous and heavy load of taxes levied by the Federal Government. It would not be so bad for these local governments to add \$5 billion a year to their debt if the Federal Government would at the same time decrease its debt by a like amount. In that way the total public debt carried by the taxpayers would at least not increase as it is, no one knows where it is going to stop.

The Federal Government could save this amount in its annual budget and apply it to the national debt if it only had the will to do so—but apparently it does not have the will to do so, and it will only be when the taxpayers themselves demand of their representatives in government that the savings be

made that anything will be done about it.

The way things are going now, the total public debt will keep on increasing and the total interest charge will keep on rising. The interest charge will rise because the debt is large, and it will also rise because the rate of interest will be higher. When more people want to borrow more money and continually add to the amount of their debt, whether this debt be public or private, then the law of supply and demand takes effect here just like it does in any other phase of a free economy—the price of

money goes up and interest rates must rise. Either that or printing press money—and a continuous and disastrous inflation which is certain to eventually destroy the nation's economy.

But while the Federal Government is more or less holding the line, the state and local governments are on a spending and borrowing spree. Ten years ago, the total debt of state and local government amounted to less than \$16 billion, now it is close to \$50 billion and the total is rising at a rate of nearly \$5 billion a year.

This great increase in public spending on the part of local and state governments is hardly avoidable, due to the rapid growth in population which is spreading over the face of the land and demanding the services of all sorts. Nor can these governments get the money needed from increased taxation alone, though they have been increasing taxes in many ways since the end of the World War II.

The reason state and local governments cannot go farther than they have toward increasing taxes and providing the facilities needed with current income is due to the continuous and heavy load of taxes levied by the Federal Government. It would not be so bad for these local governments to add \$5 billion a year to their debt if the Federal Government would at the same time decrease its debt by a like amount. In that way the total public debt carried by the taxpayers would at least not increase as it is, no one knows where it is going to stop.

The Federal Government could save this amount in its annual budget and apply it to the national debt if it only had the will to do so—but apparently it does not have the will to do so, and it will only be when the taxpayers themselves demand of their representatives in government that the savings be

made that anything will be done about it.

The way things are going now, the total public debt will keep on increasing and the total interest charge will keep on rising. The interest charge will rise because the debt is large, and it will also rise because the rate of interest will be higher. When more people want to borrow more money and continually add to the amount of their debt, whether this debt be public or private, then the law of supply and demand takes effect here just like it does in any other phase of a free economy—the price of

money goes up and interest rates must rise. Either that or printing press money—and a continuous and disastrous inflation which is certain to eventually destroy the nation's economy.

The only way to avoid disaster in one direction or the other is by economy in government—and we should not let taxes and spenders or the "new dealers" in economics tell us otherwise.

Soil conservation includes any and all measures that will in any way increase the productivity of the land and cause the land to keep on producing satisfactorily.
